

## What OCC do

- We treat 43% of the road network in Oxfordshire which equates to over 1200 miles of road (does not include the M40 or A34)
- We have a starting salt stock level of over 12000 tonnes which is a third more than in previous years
- An average salt treatment will use 245 tonnes
- We have 28 pre-determined routes across the county each with a dedicated vehicle and drivers each of which are completed in approximately 3.5 hours
- We have 5 Depots from which the gritting fleet run (25 of the dedicated winter fleet for this year are brand new and will be running on red diesel)
